[1 Packet classification on multiple fields](#)

Pankaj Gupta, Nick McKeown

August 1999

ACM SIGCOMM Computer Communication Review, Proceedings of the conference on Applications, technologies, architectures, and protocols for computer communication, Volume 29 Issue 4

Full text available:  [pdf\(1.40 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citing](#), [index terms](#)

Routers classify packets to determine which flow they belong to, and to decide what service they should receive. Classification may, in general, be based on an arbitrary number of fields in the packet header. Performing classification quickly on an arbitrary number of fields is known to be difficult, and has poor worst-case performance. In this paper, we consider a number of classifiers taken from real networks. We find that the classifiers contain considerable structure and redundancy that can ...

[2 Motion recovery for video content classification](#)

Nevenka Dimitrova, Forouzan Golshani

October 1995

ACM Transactions on Information Systems (TOIS), Volume 13 Issue 4

Full text available:  [pdf\(2.74 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citing](#), [index terms](#)

Like other types of digital information, video sequences must be classified based on the semantics of their contents. A more-precise and completer extraction of semantic information will result in a more-effective classification. The most-discernible difference between still images and moving pictures stems from movements and variations. Thus, to go from the realm of still-image repositories to video databases, we must be able to deal with motion. Particularly, we need the ability to classi ...

[3 Corrigenda: a hierarchy-aware approach to faceted classification of object-oriented components](#)

E. Damiani, M. G. Fugini, C. Bellettini

October 1999

ACM Transactions on Software Engineering and Methodology (TOSEM), Volume 8 Issue 4

Full text available:  [pdf\(310.50 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citing](#), [index terms](#)

This article presents a hierarchy-aware classification schema for object-oriented code, where software components are classified according to their behavioral characteristics, such as provided services, employed algorithms, and needed data. In the case of reusable application frameworks, these characteristics are constructed from their model, i.e., from the description of the abstract classes specifying both the framework structure and purpose. In conven ...

[4 A hierarchy-aware approach to faceted classification of object-oriented components](#)

E. Damiani, M. G. Fugini, C. Bellettini

July 1999

ACM Transactions on Software Engineering and Methodology (TOSEM), Volume 8 Issue 3

Full text available:  [pdf\(310.25 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citing](#), [index terms](#), [review](#)

This article presents a hierarchy-aware classification schema for object-oriented code, where software components are classified according to their behavioral characteristics, such as provided services, employed algorithms, and needed data. In the case of reusable application frameworks, these characteristics are constructed from their model, i.e., from the description of the abstract classes specifying both the framework structure and purpose. 5 Performance analysis of distributed applications using automatic classification of communication inefficiencies

Jeffrey Vetter

May 2000

Proceedings of the 14th international conference on Supercomputing

Full text available:  pdf (1.20 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

We present a technique for performance analysis that helps users understand the communication behavior of their message passing applications. Our method automatically classifies individual communication operations and it reveals the cause of communication inefficiencies in the application. This classification allows the developer to focus quickly on the culprits of truly inefficient behavior, rather than manually foraging through massive amounts of performance data. Specifically, we trace t ...

6 ACTION: automatic classification for full-text documents

Jacqueline W. T. Wong, W. K. Kan, Gilbert Young

April 1998

ACM SIGIR Forum, Volume 30 Issue 1

Full text available:  pdf (912.69 KB)

Additional Information: [full citation](#), [abstract](#), [citations](#), [index terms](#)

An important step in building up the document database of a full-text retrieval system is to classify each document under one or more *classes* according to the *topical domains* that the document discusses. This is commonly referred to as *classification*. *Automatic classification* attempts to replace human classifiers by using computers to automate this process. Automatic classification has two major components: (1) the *classification scheme* which defines the available cla ...

7 High-speed policy-based packet forwarding using efficient multi-dimensional range matching

T.V. Lakshman, D. Stilladis

October 1998

ACM SIGCOMM Computer Communication Review , Proceedings of the ACM SIGCOMM '98 conference on Applications, technologies, architectures, and protocols for computer communication, Volume 28 Issue 4

Full text available:  pdf (1.82 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The ability to provide differentiated services to users with widely varying requirements is becoming increasingly important, and Internet Service Providers would like to provide these differentiated services using the same shared network infrastructure. The key mechanism, that enables differentiation in a connectionless network, is the packet classification function that parses the headers of the packets, and after determining their context, classifies them based on administrative policies or re ...

8 Router plugins: a software architecture for next-generation routers

Dan Decasper, Zubin Dittla, Guru Parulkar, Bernhard Plattner

February 2000

IEEE/ACM Transactions on Networking (TON), Volume 8 Issue 1

Full text available:  pdf (530.34 KB)

Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

Keywords: communication system routing, communication system security, internet, modular computer systems

9 Router plugins: a software architecture for next generation routers

Dan Decasper, Zubin Dittla, Guru Parulkar, Bernhard Plattner

October 1998

ACM SIGCOMM Computer Communication Review , Proceedings of the ACM SIGCOMM '98 conference on Applications, technologies, architectures, and protocols for computer communication, Volume 28 Issue 4

Full text available:  pdf (1.82 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Present day routers typically employ monolithic operating systems which are not easily upgradable and extensible. With the rapid rate of protocol development it is becoming increasingly important to dynamically upgrade router software in an incremental fashion. We have designed and implemented a high performance, modular, extended integrated services router software architecture in the NetBSD operating system kernel. This architecture allows code modules, called *plugins*, to be dynamically ...

Keywords: high performance integrated services routing, modular router architecture, router plugins

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

In information-filtering environments, uncertainties associated with changing interests of the user and the dynamic document stream must be handled efficiently. In this article, a filtering model is proposed that decomposes the overall task into subsystem functionalities and highlights the need for multiple adaptation techniques to cope with uncertainties. A filtering system, SIFTER, has been implemented based on the model, using established techniques in information retrieval and artificial ...

September 1995

ACM Computing Surveys (CSUR), Volume 27 Issue 3Full text available:  pdf(3.06 MB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Two-dimensional image motion is the projection of the three-dimensional motion of objects, relative to a visual sensor, onto its image plane. Sequences of time-ordered images allow the estimation of projected

two-dimensional image motion as either instantaneous image velocities or discrete image displacements. These are usually called the optical flow field or the image velocity field. Provided that optical flow is a reliable approximation to two-dimensional ...

[18 Adaptive resource management for flow-based IP/ATM hybrid switching systems](#)

Hao Che, San-qi Li, Arthur Lin

October 1998

IEEE/ACM Transactions on Networking (TON), Volume 6 Issue 5
